

REMARKS

The rejections of Claims 1, 2 and 6 as being anticipated by Yamada et al under 35 USC § 102(b) and of Claims 3-5 as being unpatentable over Yamada et al in view of Erskine et al under 35 USC § 103(a) are traversed. Reconsideration of each of these rejections is respectfully requested.

The Office Action apparently equates the lead wire 30 in Fig. 1 of Yamada et al to the claim first and second lead conductors of Claims 1-6. That is, applicants assume, pursuant to their attached marked-up sketch of Fig. 1 of Yamada et al, that lead wires 30A1, 30A2 correspond to the claimed first lead conductor and that lead wires 30A1, 30A2 correspond to the claimed second lead conductor. However, the claimed second lead conductor (15H2 and 15H3) extends to an outer circumferential end of the substrate as shown in Fig. 1. No such arrangement is found in the Yamada et al measuring element where none of the lead wires extend to the outer circumference notwithstanding any statement in the Office Action to the contrary.

Thus, even if the Yamada et al and Erskine et al arrangements would have been combinable to one of ordinary skill in the art in an obvious manner, the resulting hypothetical combination would still not have produced the present invention as claimed. Nor does the Yamada et al patent discloses a thinner connection but the Office Action does not explicate what structure constitutes that connection. Applicants submit that such structure does not exist.

Accordingly, early and favorable action is earnestly solicited.
